Summary of Findings
Winnipeg Street Census 2015.

The Winnipeg Street Census marks the first ever attempt at a comprehensive view of homelessness in Winnipeg. We sought to ask not only how many people are homeless, but to learn why and to hear their stories. On the night of October 25, 2015, there were at least 1,400 people experiencing homelessness in Winnipeg.

Over 24 hours from October 25-26, 300 volunteers attended, or data was gathered from: 7 emergency, domestic violence and youth shelters, 9 transitional housing sites, 10 bottle depots, and 29 community agencies or drop-in locations for Winnipeg’s first ever Street Census. Surveyors also walked almost 140km of inner city streets.

For this large-scale survey, everyone encountered was asked about their housing situation to evaluate the magnitude of homelessness in the city. Everyone whose circumstances fit the definition of homelessness was asked to complete a 19 question interview about them and their experiences.

Where people stayed

On the night of October 25, 2015, there were at least 1,400 people experiencing homelessness in Winnipeg.

<td>333</td>
<td>281</td>
<td>242</td>
</tr>
</tbody>
</table>

132 individuals were 
unsheltered, that is, staying in a public space like a bus shelter or park, in a tent, a car, or walking around all night to stay safe
347 people stayed in an emergency 
shelter, domestic violence shelter or 
youth shelter
333 people stayed at a 
friend’s, family’s or 
stranger’s place temporarily because they didn’t have a home of their own
281 individuals stayed in 
transitional housing for 
people who have been, or would otherwise be, homeless
242 people were in an 
institutional 
setting and did not have a permanent home to return to

65 people stayed at a hotel / motel

479 people in absolute homelessness
921 people provisionally accommodated

The age breakdown does not include residents of the Salvation Army emergency or transitional housing programs, while the gender breakdown does, which explains the slight differences. No one under the age of 16 was surveyed and dependent children were not included in the age/gender breakdown.

The median age of people experiencing homelessness was 43.

There were 225 youth (26.5%), under the age of 30, and at least 18 seniors, aged 65 or older.

There were 121 children with their parents/guardians.

* This is the number of survey respondents staying temporarily at someone else’s place with no guarantee of returning each night. Because people stay in these circumstances throughout Winnipeg and often do not utilize any services, this SHOULD NOT be seen as an estimate of the population in this circumstance.

** This is the number of survey respondents staying in a hotel or motel without a permanent home to return to. People staying monthly in hotels do not have tenancy agreements or legal protection. Surveys from respondents staying at the Bell Hotel were excluded because it is considered to be permanent housing.

*** Data from all institutional settings has not yet been received. Requests have been made for data on people experiencing homelessness in the Corrections system, youth and children in emergency placements through Child and Family Services, and people receiving hotel vouchers due to flooding or fires. Therefore, this number is likely an undercount.
Key Circumstances

Youth homelessness leads to adult homelessness. The median age at which people first became homeless was 24 years, and the most frequent age was 18 years.

Of those experiencing homelessness for 10+ years, the majority (70%) first became homeless when they were 18 years or younger.

The most common reason people experienced homelessness for the first time was family conflict or breakdown. 39.4% became homeless for this reason, and ¼ of them experienced family violence.

Almost half, 49.2% of people spent time in foster care or group homes.

6.0% have served in the military or RCMP.

10.8% are part of LGBTQ community overall.

23.1% of youth (age 29 or under) are part of the LGBTQ community.

1.8% are recent immigrants or refugees (in Canada for 5 years or less).

Events leading to homelessness

Youth homelessness leads to adult homelessness. The median age at which people first became homeless was 24 years, and the most frequent age was 18 years.

Of those experiencing homelessness for 10+ years, the majority (70%) first became homeless when they were 18 years or younger.

The most common reason people experienced homelessness for the first time was family conflict or breakdown. 39.4% became homeless for this reason, and ¼ of them experienced family violence.

Reasons for first experience of homelessness

(Participants could select more than one reason)

“One gentleman was telling me he didn’t have a concrete reason for becoming homeless, he just realized one day that it was cold out and he had nowhere to go. It struck me how, just because of a lack of support, homelessness can suddenly happen.”

Indigeneity

49.9% of First Nations people grew up in a First Nations community.

57.9% of Indigenous people surveyed have been in foster care or group homes.

“He told his story simply even though it was filled with tragedy. From the 60’s scoop, residential school, and foster homes until CFS said “good-bye” at age 18, when he first became homeless. He had a family but it fell apart. They stayed in communication until his son was murdered and he lost it all... having his own place means he would live alone – he talked a while about how lonely that would be.”
**Length of Time Homeless**

People move in and out of homelessness as their life circumstances and supports change.

The average length of most recent time homeless was 9 months. 354 people experienced homelessness for 6 months or longer.

The average cumulative length of time spent homeless over a lifetime was 24 months. 181 people experienced homelessness 3 or more times in the past three years.

“I spoke with someone who was homeless for the first time when he was two. His mother struggled with alcoholism and as a result he struggles with FASD. His income of EIA disability isn’t enough for him to get a place of his own on a permanent basis but he periodically has a stable home thanks to the help of his siblings.”

**Income**

Income sources (respondents could choose more than one)

- **SOCIAL ASSISTANCE** 35.4%
- **SELF / INFORMAL** 18.2%
  - self or informal employment: busking, panhandling, squeegeeing, selling art, etc.
- **DISABILITY ASSISTANCE** 16.8%
- **EMPLOYMENT** 16.5%
  - formal, including temporary and part-time
- **FAMILY** 6.6%
  - money from family or friends
- **SENIOR** 5.4%
  - senior’s benefits
- **2.4%**
  - Employment Insurance or Workers’ Compensation
- **NO INCOME** 7.2%

50.9% said that low income is a barrier to finding housing.

Those with no income spoke about being cut-off, waiting for, or unable to receive income assistance. Some lacked the necessary identification. Others said they were eligible but felt too proud to ask for assistance.

**Barriers and Challenges**

The main challenges people faced in finding housing were:

- **INCOME** 50.9%
  - low income, no income, lack of employment
- **HOUSING** 36.7%
  - low vacancies, poor housing conditions, high rents and long waiting lists
- **ADDICTION** 13.7%
- **SUPPORT** 11.6%
  - lacking resources like transportation / damage deposit, and lacking support with life skills / finding housing
- **HEALTH** 11.2%
  - health or mental health challenges
- **6.5%**
  - family breakdown, conflict or violence
- **3.5%**
  - criminal record
- **3.2%**
  - discrimination

“The individual and their wife and three children moved to Winnipeg. Depressed, he turned to drugs and had his kids taken into CFS like he was as a child. He felt like a failure and wanted to end his life by jumping off a bridge. A woman talked him down and got him help at a hospital. He was diagnosed with bipolar disorder and kept returning to drugs without knowing why.”
The Winnipeg Street Census

The Winnipeg Street Census is a survey conducted over a 24 hour period to gather information about the extent and nature of homelessness in Winnipeg. This information can be used to improve decision-making for funders, governments, and community organizations. Over time, it will be used to track progress on ending homelessness.

The Street Census follows an approach used by cities around the world. The method has been adapted to Winnipeg’s local context based on input from local researchers, service providers, outreach teams, police and safety patrols, and people with experience of homelessness. On the night of October 25, trained volunteers went to Winnipeg’s emergency and transitional shelters to survey the individuals and families spending the night. The next day, volunteers surveyed people in places where people who are homeless spend their time: breakfast and lunch programs, libraries, resource centres, and more. From 4pm-7pm they walked 27 different routes to survey everyone they encountered about their housing circumstances.

Methods, Data & Limitations

The Winnipeg Street Census utilized the Canadian Observatory on Homelessness definition and typology of homelessness and housing exclusion. In addition to survey data, administrative data about bed use on the night of October 25th has been gathered from emergency shelters, youth shelters, shelters for individuals and families impacted by domestic violence, and interim housing for people who are homeless (transitional housing). Some data has been provided by institutional, residential treatment, and community mental health residential programs for individuals who were homeless upon entering the residential setting, lost housing while in the setting, or will exit the program to homelessness.

Though the methods used in this project were comprehensive, it is virtually impossible to get an exact count of the homeless population. Invisibility is a survival strategy for people experiencing homelessness. This was a voluntary survey and data is self-reported. The locations and routes where surveys took place were concentrated in the inner city and decided based on feedback from outreach teams, community agency staff and people who have experienced homelessness, however people experience homelessness and spend their time in other neighbourhoods too. The method vastly undercounts those who are staying temporarily with family, friends, or strangers and efforts were not made to identify overall numbers of those staying in hotels who do not have a permanent home. Results should not be seen as an estimate of the hidden homeless population.

More details about methodology, limitations and definitions is available in the full report http://streetcensuswpg.ca.
